

Banking Management System

Problem Statement: Managing bank accounts and transactions manually is time-consuming and error-prone. This system provides a digital solution to manage users, accounts, and transactions efficiently.

Target Users: Bank customers and bank staff

System Design

OOP Concepts Used

Abstraction

Account is an abstract class hiding implementation details

Inheritance

SavingsAccount and CurrentAccount extend Account

Polymorphism

Same method withdraw() behaves differently for account types

Encapsulation

Balance is private and accessed using methods

📌 **Design Pattern** Singleton pattern for Bank class (only one bank system)

Technical Highlight

Transaction Handling System

To ensure data consistency and avoid errors in financial operations
